Jefferson County – Planning and Zoning  
100 Jefferson County Parkway, Suite 3550  
Golden, CO 80419  
Attn: Dylan Monke, Planner

Re: Shadow Mountain Bike Park - Case No. Case No. 23-102980 RZ

Dear Mr. Monke,

We are in receipt of the First Referral Response Letter from Jefferson County Transportation and Engineering (“**T&E**”), citing a due date of March 24, 2023, as part of the first referral of the application for a special use for the Shadow Mountain Bike Park project (the “**Application**”). We understand that T&E cited concerns related to traffic operations and transportation planning. However, we note that no concerns were noted by T&E with respect to “Drainage” or “Right-of-Way/Roadway Corridor Expansion Projects.”

All comments received from T&E were restated in the Planning Engineering Memorandum provided by Jefferson County Planning and Zoning (“**P&Z**”), dated April 10, 2023. The Planning Engineering Memorandum further requires that the Transportation Analysis be updated to address the comments.

In response to the comments received from T&E, and in response to the transportation comments incorporated into the Engineering Memorandum, the following documents are provided:

- Response letter from LSC Transportation Consultants, Inc. dated November 21, 2023, attached hereto as Exhibit A. This letter responds to each comment listed in the T&E Referral Response Letter, and the restated comments included in the Planning Engineering Memorandum.
- Updated Transportation Analysis, “Attachment A - Transportation Consultants Traffic Impact Analysis”, which incorporates and addresses the comments listed in the T&E Referral Response Letter. This also addresses the Planning Engineering Memorandum, which also requires these updates to the Transportation Analysis.

Sincerely,

A handwritten signature in blue ink, appearing to read "Phil Bouchard".

Phil Bouchard

Shadow Mountain Bike Park

A handwritten signature in blue ink, appearing to read "Jason Evans".

Re: Shadow Mountain  
Bike Park  
Jefferson County, CO  
LSC #220850

Dear Mr. Beck:

At your request, we have prepared this response to address comments from Jefferson County regarding our December 5, 2022 *Shadow Mountain Bike Park Traffic Impact Analysis*. The following are the comments and our responses:

**Comment a:** **A full Transportation Impact Study will be required at time of SDP submittal. Follow requirements as outlined in *Transportation Design and Construction Manual*.**

*Response:* *Comment noted.*

**Comment b:** **This land use does not align with a trip generation code identified in the ITE 10<sup>th</sup> Edition. Provide greater justification for 1.5 turnover of vehicles per day using data collected from similar land uses.**

*Response:* *There are no good local examples of a similar type project and only a handful nationwide. The assumptions were agreed to with the project team and a detailed description provided in the updated study.*

**Comment c:** **The County does not support the use of left turn acceleration lanes; these shall not be considered as a potential mitigation measure. Revise Table 1a, Table 1b, and any other places in the report which show a mitigated level of service.**

*Response:* *The recommended acceleration lanes will not be needed if these intersections are improved to be modern roundabouts as noted below in Comment d.*

**Comment d:** **The County has preliminarily identified the intersections of 73/Barkley and 73/Shadow Mountain for installation of roundabouts. Given the significant impact of the development on these intersections (approximately 25% of the traffic through the intersections will be generated from the**

December 8, 2023

Page 3

Mr. Travis Beck

Page 2

November 21, 2023

*Shadow Mountain Bike Park - Response to Comments*

**development), the County will be seeking contribution from the applicant for these public improvements.**

**Response:** *Comment noted.*

**Comment e:** **Provide a dedicated westbound left turn lane into the development. County regulations require a left turn lane at driveways on major collectors. Shadow Mountain Dr is currently classified as a collector, however the traffic volumes are in the range of a major collector (ADT of 2,000-8,000). Since the Shadow Mountain corridor is effectively functioning as a major collector, and the 85<sup>th</sup> percentile speed on Shadow Mountain is greater than 45mph, and a significant proportion of traffic on Shadow Mountain will now be westbound left turning traffic at the access point, provide a dedicated westbound left turn lane into the development.**

**Response:** *The updated analysis includes scenarios with and without this lane because it is not certain it can be provided due to topography and wetland type areas.*

**Comment f:** **An eastbound right turn acceleration lane shall be evaluated in the Safety section of the forthcoming Transportation Impact Study required at time of SDP submittal. Right turn acceleration lanes may be required where necessary for public safety and traffic operations based upon site specific conditions.**

**Response:** *The updated analysis includes scenarios with and without this lane for comparison purposes.*

**Comment g:** **Provide justification for the 1% annual growth rate used for future traffic projections in 2025 and 2042.**

**Response:** *The 2020 and 2050 DRCOG models both show 4,000 daily trips on Shadow Mountain Road so little or no growth is expected. The annual growth rate was updated to be 0.5 percent to maintain a conservative analysis. A growth rate of one percent was used on County Highway 73 and Barkley Road.*

**Comment h:** **The value used for % Heavy Vehicles in the Synchro analysis is not reflective of actual expected conditions.**

**Response:** *This was revisited. The site-generated trips are expected to be primarily passenger vehicles so the additional site traffic will reduce the % Heavy Vehicles for some movements.*

**Comment i:** **The value used for PHF in the Synchro analysis does not match peak hour factor collected with traffic counts. Use the actual peak hour factors for analysis in existing scenarios; provide justification for peak hour factor used in projected future scenarios.**

**Response:** *These values were revisited and updated as appropriate.*

December 8, 2023

Page 4

Mr. Travis Beck

Page 3 November 21, 2023  
*Shadow Mountain Bike Park - Response to Comments*

**Comment j:** **Provide explanation in the report for why the Saturday and Sunday PM periods were not analyzed.**

*Response:* *The majority of visits in the summer season are expected to be in the morning and midday due to frequent thunderstorms in the summer afternoons. The departure from the site towards the end of the day is not expected to be concentrated but rather occur over several hours.*

**Comment k:** **Show the existing ADT on Figures 3b and 3c.**

*Response:* *These figures have been updated.*

**Comment l:** **Provide a new Figure (or modify Figure 3a) so that the ADT used throughout the analysis is clear on the Figure.**

*Response:* *This figure has been updated.*

**Comment m:** **Per the narrative, the applicant will work with the local Sheriff and/or Road and Bridge authority within the Right-of-Way to strictly enforce no parking along Shadow Mountain Drive. Please describe the type of work that the applicant is committing to provide.**

*Response:* *The applicant would inform its guests that no parking is allowed along Shadow Mountain Drive. The applicant is willing to provide appropriate signing to this effect and have a towing company on call to handle violators.*

**Comment n:** **Provide general explanation for the 0 value hourly counts for Shadow Mtn Drive west of Highway 73 on Tuesday, August 23, 2022 at 1:00 PM until Wednesday, August 24 at 1:00 PM. Provide justification for why this missing data does not affect the analysis and conclusions in the report.**

*Response:* *The data collection was temporarily stopped due to equipment failure. The days affected were not used to calculate the average volume or in calculating the future volumes.*

**Comment o:** **The County collected traffic data in November 2022 at the same location as Site 1. The November ADT was 1,840, which is below the ADT that the applicant collected in August 2022. The County affirms that the applicant appropriately used traffic data for the season that would experience the highest background traffic volumes, in addition to the greatest impact from the development, and that this traffic report has therefore considered the peak traffic impacts to the area.**

*Response:* *Comment noted.*

Re: Shadow Mountain  
Bike Park  
Jefferson County, CO  
LSC #220850

Dear Mr. Beck:

In response to your request, LSC Transportation Consultants, Inc. has prepared this traffic impact analysis for the proposed Shadow Mountain Bike Park development to address County comments. As shown on Figure 1, the site is located south of Shadow Mountain Drive about two miles west of County Highway 73 in Jefferson County, Colorado.

### **REPORT CONTENTS**

The report contains the following: the existing roadway and traffic conditions in the vicinity of the site including the lane geometries, traffic controls, posted speed limits, etc.; the existing weekday, Saturday, and Sunday peak-hour traffic volumes; the existing daily traffic volumes in the area; the typical weekday, Saturday, and Sunday site-generated traffic volume projections; the assignment of the projected traffic volumes to the area roadways; the projected long-term background and resulting total traffic volumes on the area roadways; the site's projected traffic impacts; and any recommended roadway improvements to mitigate the site's traffic impacts or the impacts from growth in background traffic.

### **LAND USE AND ACCESS**

The site is proposed to include a downhill mountain bike park with lift service. The site is proposed to have about 300 parking spaces and with about 20 employees. Full movement access is proposed from Shadow Mountain Drive as shown in the conceptual site plan in Figure 2.

The applicant plans to implement ticketing and parking technology to avoid guests arriving with nowhere to park to help reduce impacts to the surrounding area. This process is described as follows:

### **Parking Reservations**

The applicant (SMBP) will implement a parking reservation system that will be available at the time that visitors purchase bike park passes. SMBP will strongly encourage visitors to purchase tickets online prior to arrival, with the goal of making sure visitors do not arrive at the bike

park without a parking reservation. SMBP has decided to implement this system to benefit the visitor experience and surrounding community in the following ways:

1. The parking reservation system will control the amount of riders the bike park sees on any given day, thereby limiting pressure on SMBP's trail network and ensuring the bike park is never over visitor capacity. Limiting visitor capacity will also limit pressure on local roadways, thereby benefitting the surrounding neighborhood as well. The reservation system will allow visitors to relinquish their parking spot when they're done riding so that the parking reservation system stays up-to-date for incoming visitors.
2. The parking reservation system has the ability to reduce the potential for roadway congestion around morning and evening peak-hours because visitors will have a reservation and will have no incentive to rush to SMBP to find parking during opening hours or other peak times.
3. SMBP's parking reservation system will allow staff to closely manage the activity of bike park visitors, which will allow staff to quickly remedy any issues that arise between visitors and residential traffic using the roadways near SMBP.

### **Cell Phone Service**

The base area, in its existing condition, has cell coverage. The rest of the project area has limited coverage. SMBP plans to provide Wifi from the day lodge and work with major providers to improve cell service in the project area for riders.

### **ROADWAY AND TRAFFIC CONDITIONS**

#### **Area Roadways**

The major roadways in the site's vicinity are shown on Figure 1 and are described below.

- **County Highway 73** is a north-south, two-lane major collector roadway east of the site. The intersection with Shadow Mountain Drive is stop-sign controlled. The posted speed limit in the vicinity of the site is 40 mph.
- **Shadow Mountain Drive** is an east-west, two-lane collector roadway north of the site. The intersection with County Highway 73 is stop-sign controlled. The posted speed limit in the vicinity of the site is 40 mph but reduces to 30 mph to the east closer to County Highway 73.
- **Barkley Road** is an east-west, two-lane major collector roadway east of the site. The intersection with County Highway 73 is stop-sign controlled. The posted speed limit in the vicinity of the site is 30 mph.

#### **Existing Traffic Conditions**

Figure 3a shows the existing lane geometries, traffic controls, and traffic volumes in the site's vicinity on a typical weekday afternoon peak-hour and the daily traffic volumes for five consecutive days. Figures 3b and 3c show the typical peak-hour and daily traffic volumes on a

Saturday and Sunday, respectively. The peak-hour traffic volumes and daily traffic counts are from the attached traffic counts conducted by Counter Measures in August, 2022.

## **2025 and 2043 Background Traffic**

Figure 4a shows the estimated 2025 weekday background traffic which assumes an annual growth rate of one-half percent on Shadow Mountain Drive and one percent on Highway 73 and Barkley Road to maintain a conservative analysis. DRCOG (Denver Regional Council of Governments) shows minimal growth is expected on Shadow Mountain Drive over time. Figure 4b shows the estimated 2025 Saturday background traffic which assumes an annual growth rate of one-half percent on Shadow Mountain Drive and one percent on Highway 73 and Barkley Road to maintain a conservative analysis. Figure 4c shows the estimated 2025 Sunday background traffic which assumes an annual growth rate of one percent. The Sunday daily volumes are based on multiplying the Sunday peak-hour rates by the ratio of Saturday peak-hour trips to Saturday daily trips.

Figure 5a shows the estimated 2043 weekday background traffic; Figure 5b shows the estimated 2043 Saturday background traffic; and Figure 5c shows the estimated 2043 Sunday background traffic. These 2043 background volumes assume an annual growth rate of one percent.

## **Existing, 2025, and 2043 Background Levels of Service**

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A is indicative of little congestion or delay and LOS F is indicative of a high level of congestion or delay. Attached are specific level of service definitions for unsignalized intersections.

The intersections in Figures 3a through 5c were analyzed as appropriate to determine the existing, 2025 background, and 2043 background levels of service using Synchro. Table 1a shows the existing and 2025 level of service analysis results and Table 1b shows the 2043 level of service results. The level of service reports are attached.

- 1. Shadow Mountain Drive/County Highway 73:** All movements at this unsignalized intersection currently operate at LOS "D" or better during all five scenarios and are expected to do so through 2025. By 2043, the intersection is planned to be converted to a modern roundabout and is expected to operate at an overall LOS "A" during all scenarios.
- 2. County Highway 73/Barkley Road:** All movements at this unsignalized intersection currently operate at LOS "D" or better during all five scenarios with the following exception: The southwestbound to southeastbound left-turn movement operates at LOS "F" during the weekday afternoon peak-hour and the Saturday mid-day peak-hour. By 2025, the southwestbound left-turn movement is expected to operate at LOS "E" or "F" during the weekday afternoon peak-hour, and the Saturday morning and mid-day peak-hour. By 2043, the intersection is planned to be converted to a modern roundabout and is expected to operate at an overall LOS "A" during all scenarios.
- 3. Shadow Mountain Drive/Site Access:** This unsignalized intersection was analyzed only in the total traffic scenarios.

## TRIP GENERATION

Table 2 shows the estimated trip generation for the proposed site per the rates developed by LSC based on coordination with the applicant and project team.

The site is projected to generate about 520 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning peak-hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 115 vehicles would enter and about 11 vehicles would exit the site. During the afternoon peak-hour, which generally occurs for one hour between 4:00 and 6:00 p.m., about 8 vehicles would enter and about 80 vehicles would exit.

On the average Saturday and Sunday, the site is projected to generate up to about 1,000 vehicle-trips with about half entering and half exiting during a 24-hour period. During the morning peak-hour, which generally occurs for one hour between 8:30 and 10:30 a.m., about 220 vehicles would enter and about 21 vehicles would exit the site. During the mid-day peak-hour, which generally occurs for one hour between 12:00 and 2:00 p.m., about 15 vehicles would enter and about 155 vehicles would exit.

The average daily traffic during the peak season is expected to be between 520 and 1,000 trips; most weekdays are expected to have 520 or fewer trips.

## Details on Vehicle Turnover

This report assumes a vehicle/parking stall turnover estimate of 1.6 (i.e., a parking stall will have 1.6 vehicles parked each day). This estimate is based on a number of factors, including trail mileage, vertical relief, chairlift length, lap time, number of laps/visit, vehicular travel distance to bike park, ticket type (day pass vs. season pass), and length of stay. Specifically, based on these factors, it is estimated that an average lap would be approximately 30 minutes, the average number of laps would be 8 laps, and the amount of milling time (i.e., parking, ticketing, break time/lunch) would be approximately 1 hour. With this information, the average guest would stay approximately 5 hours. For an average operating time of 8 hours, the average vehicle turnover would be the average operating time divided by the average guest stay. This results in an average turnover of 1.6, meaning that on days with a full parking lot, about 60 percent of the spaces could be vacated and then replaced by another vehicle.

The average vehicle turnover is a planning metric used to inform traffic and parking estimates. In this study, it directly informs the average number of vehicles entering and exiting the parking lot and thus the average vehicle trips per day, however, has a less direct correlation with peak traffic patterns because it applies to the full day of operation. Because of the uniqueness of the operation and the variety of planning factors considered to determine the vehicular turnover, there is not an “industry-standard” planning metric.

## TRIP DISTRIBUTION

Figure 6 shows the estimated directional distribution of the site-generated traffic volumes on the area roadways. The estimates were based on the location of the site with respect to the regional population, employment, and activity centers; and the site’s proposed land use.

## TRIP ASSIGNMENT

Figure 7a shows the estimated weekday site-generated traffic volumes based on the weekday trip generation estimate (from Table 2) and the directional distribution in Figure 6.

Figure 7b shows the estimated Saturday/Sunday site-generated traffic volumes based on the Saturday/Sunday trip generation estimate (from Table 2) and the directional distribution in Figure 6.

## 2025 AND 2043 TOTAL TRAFFIC

Figure 8a shows the 2025 weekday total traffic which is the sum of the 2025 weekday background traffic volumes (from Figure 4a) and the weekday site-generated traffic volumes (from Figure 7a). Figure 8a also shows the recommended lane geometry and traffic control.

Figure 8b shows the 2025 Saturday total traffic which is the sum of the 2025 Saturday background traffic volumes (from Figure 4b) and the weekend site-generated traffic volumes (from Figure 7b). Figure 8b also shows the recommended lane geometry and traffic control.

Figure 8c shows the 2025 Sunday total traffic which is the sum of the 2025 Sunday background traffic volumes (from Figure 4c) and the weekend site-generated traffic volumes (from Figure 7b). Figure 8c also shows the recommended lane geometry and traffic control.

Figure 9a shows the 2043 weekday total traffic which is the sum of the 2043 weekday background traffic volumes (from Figure 5a) and the weekday site-generated traffic volumes (from Figure 7a). Figure 9a also shows the recommended lane geometry and traffic control.

Figure 9b shows the 2043 Saturday total traffic which is the sum of the 2043 Saturday background traffic volumes (from Figure 5b) and the weekend site-generated traffic volumes (from Figure 7b). Figure 9b also shows the recommended lane geometry and traffic control.

Figure 9c shows the 2043 Sunday total traffic which is the sum of the 2043 Sunday background traffic volumes (from Figure 5c) and the weekend site-generated traffic volumes (from Figure 7b). Figure 9c also shows the recommended lane geometry and traffic control.

## PROJECTED LEVELS OF SERVICE

The intersections in Figures 8a through 9c were analyzed to determine the 2025 and 2043 total traffic levels of service. Table 1a shows the existing and 2025 total level of service analysis results and Table 1b shows the 2043 total level of service results. The level of service reports are attached.

1. **Shadow Mountain Drive/County Highway 73:** All movements at this unsignalized intersection are expected to operate at LOS "D" or better during all five scenarios through 2043 with the following exception: The northeastbound left-turn movement is expected to operate at LOS "E" or "F" during three of the five scenarios by 2025. By 2043, the intersection is planned to be converted to a modern roundabout by Jefferson County and is expected to operate at an overall LOS "B" or better during all scenarios.

2. **County Highway 73/Barkley Road:** All movements at this unsignalized intersection are expected to operate at LOS "D" or better during all five scenarios through 2043 with the following exception: The southwestbound left-turn movement is expected to operate at LOS "E" or "F" during four of the five scenarios in 2025 and 2043. By 2043, the intersection is planned to be converted to a modern roundabout by Jefferson County and is expected to operate at an overall LOS "C" or better during all scenarios.
3. **Shadow Mountain Drive/Site Access:** All movements at this unsignalized intersection are expected to operate at LOS "A" during all five scenarios through 2043.

## **CONCLUSIONS AND RECOMMENDATIONS**

### **Trip Generation**

1. The site is projected to generate about 520 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning peak-hour, about 115 vehicles would enter and about 11 vehicles would exit the site. During the afternoon peak-hour, about 8 vehicles would enter and about 80 vehicles would exit.
2. On the average Saturday and Sunday, the site is projected to generate up to about 1,000 vehicle-trips with about half entering and half exiting during a 24-hour period. During the morning peak-hour, about 220 vehicles would enter and about 21 vehicles would exit the site. During the mid-day peak-hour, about 15 vehicles would enter and about 155 vehicles would exit

### **Projected Levels of Service**

3. All movements at the unsignalized intersections analyzed are expected to operate at LOS "D" or better through 2043 in all five scenarios with the following exceptions: The northeastbound left-turn movement at the Shadow Mountain Drive/County Highway 73 and the southwestbound left-turn movement at the County Highway 73/Barkley Road intersection are expected to operate at LOS "E" or "F" during several of the five scenarios. By 2043, both intersections are planned to be converted to modern roundabouts and are expected to operate at an overall LOS "C" or better during all scenarios. It is important to note that minimal site traffic is expected to make the movements with poor levels of service.

### **Recommendations**

4. The recommended improvements to mitigate poor levels of service are shown in Figure 10. These future roundabouts are planned by Jefferson County; the Applicant would work with the County to agree upon a contribution for these improvements. Figure 10 shows the peak season site-generated trips will comprise about 15 percent of Saturday peak-hour trips at the northern roundabout and about 12 percent at the southern roundabout. These percentages will be lower on weekdays and during the off-season.

\* \* \* \* \*

We trust our findings will assist you in gaining approval of the proposed Shadow Mountain Bike Park development. Please contact me if you have any questions or need further assistance.

Notes:

- (1) Assumes 300 parking spaces and a 1.6 turn over ratio for a total of 480 round-trips on the weekend with half that usage on a typical weekday. Assumes 20 employees with 20 round-trips.
- (2) Assumes 70 percent of arrival trips occur during the weekday afternoon peak-hour or Saturday/Sunday morning peak-hour with ten percent being dropped off and 50 percent of departure trips occur during the weekend midday peak-hour with ten percent being dropped off. Assumes half of the employees arrive during the peak-hour and a quarter depart during the peak-hour.
- (3) The average daily traffic for the site during the peak season is expected to be between 520 and 1,000 trips considering most weekdays are expected to have 520 or fewer trips per day.

Potential Improvements Suggested by Jefferson County

#### LEGEND:

↑ = Stop Sign

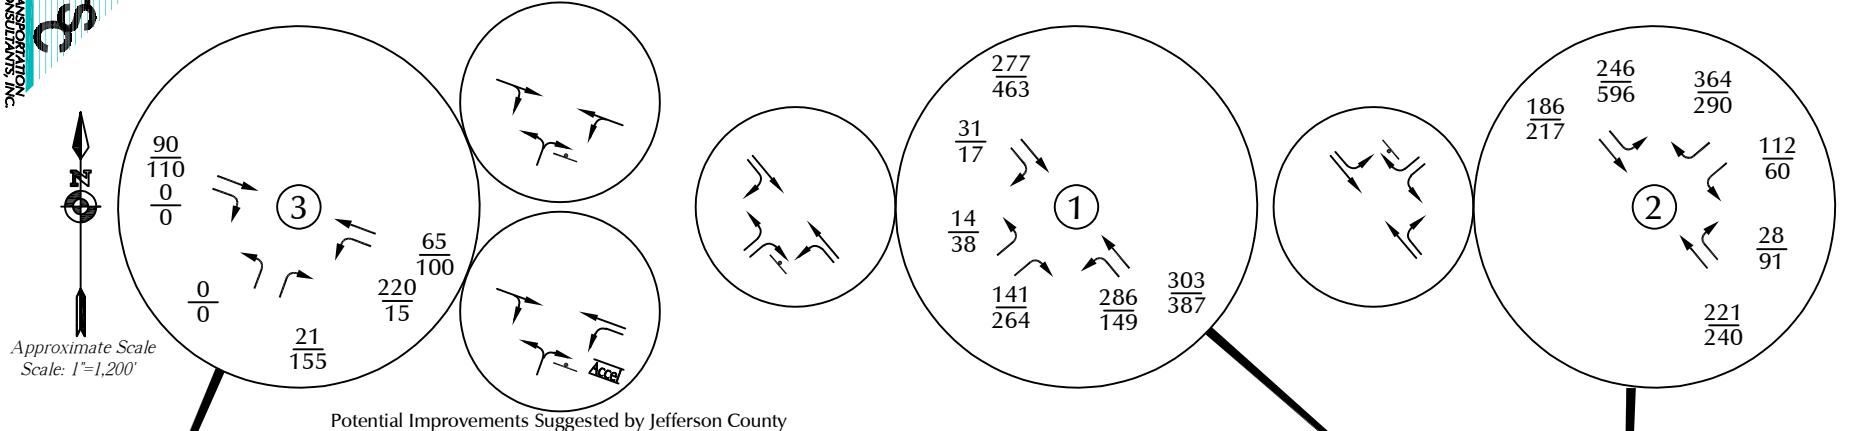

30 = Weekday Afternoon Peak Hour Traffic (4:45–5:45pm)

#### Notes:

1. These volumes are the sum of the volumes in Figures 4a and 7a.
2. The potential site access improvements suggested by Jefferson County are a left-turn lane for ingress and a right-turn acceleration lane for egress. The acceleration lane is not expected to provide much benefit but a left-turn lane for ingress could be beneficial if there are no existing constraints preventing it such as right-of-way or wetland limitations. An appropriate length for a left-turn lane would be 275 feet plus a 160-foot transition taper and 45:1 redirect taper.

Figure 8a

Year 2025  
Weekday Total Traffic  
Shadow Mountain Bike Park (LSC #220850)

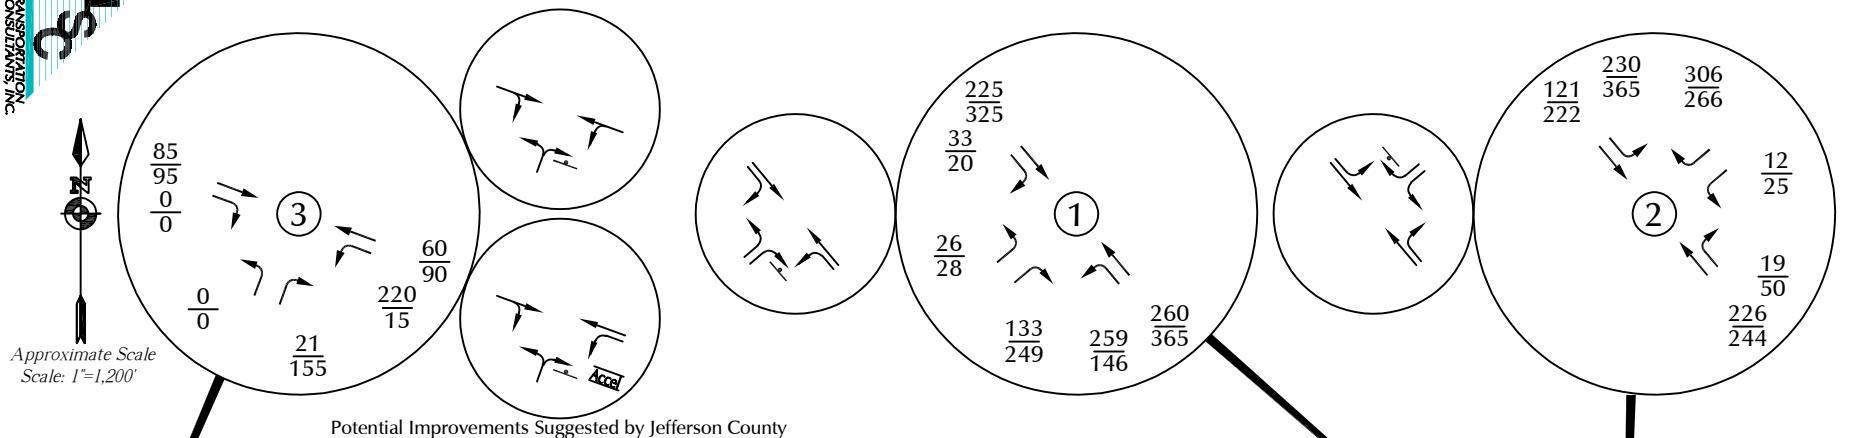

Notes:

- These volumes are the sum of the volumes in Figures 4b and 7b.
- The potential site access improvements suggested by Jefferson County are a left-turn lane for ingress and a right-turn acceleration lane for egress. The acceleration lane is not expected to provide much benefit but a left-turn lane for ingress could be beneficial if there are no existing constraints preventing it such as right-of-way or wetland limitations. An appropriate length for a left-turn lane would be 275 feet plus a 160-foot transition taper and 45:1 redirect taper.

**Saturday Total Traffic**

Shadow Mountain Bike Park (LSC #220850)

#### LEGEND:

- ↑ = Stop Sign
- $\frac{26}{35}$  = Sunday Morning Peak Hour Traffic (9:00am–10:00am)
- $\frac{35}{35}$  = Sunday Midday Peak Hour Traffic (12:30pm–1:30pm)

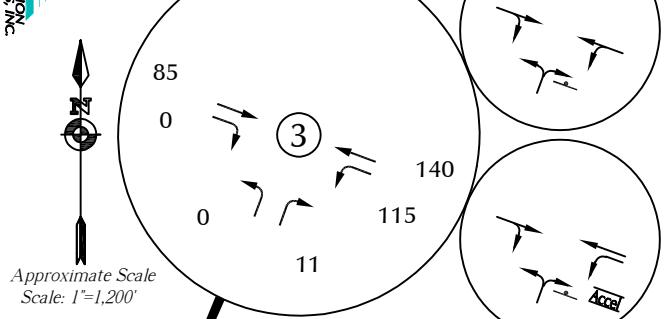

#### Notes:

1. These volumes are the sum of the volumes in Figures 4c and 7b.
2. The potential site access improvements suggested by Jefferson County are a left-turn lane for ingress and a right-turn acceleration lane for egress. The acceleration lane is not expected to provide much benefit but a left-turn lane for ingress could be beneficial if there are no existing constraints preventing it such as right-of-way or wetland limitations. An appropriate length for a left-turn lane would be 275 feet plus a 160-foot transition taper and 45:1 redirect taper.

Shadow Mountain Bike Park (LSC #220850)

Potential Improvements Suggested by Jefferson County

#### LEGEND:

↑ = Stop Sign

30 = Weekday Afternoon Peak Hour Traffic (4:45–5:45pm)

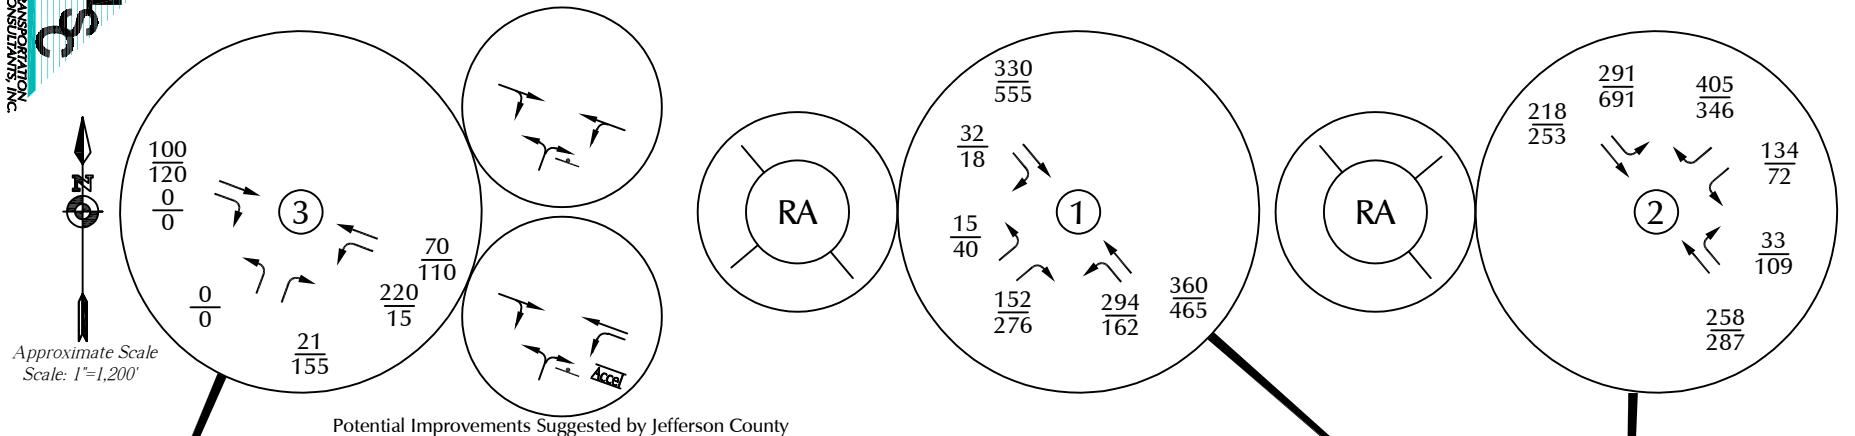

#### Notes:

1. These volumes are the sum of the volumes in Figures 5a and 7a.
2. The potential site access improvements suggested by Jefferson County are a left-turn lane for ingress and a right-turn acceleration lane for egress. The acceleration lane is not expected to provide much benefit but a left-turn lane for ingress could be beneficial if there are no existing constraints preventing it such as right-of-way or wetland limitations. An appropriate length for a left-turn lane would be 275 feet plus a 160-foot transition taper and 45:1 redirect taper.

Figure 9a

**Year 2043**  
**Weekday Total Traffic**

Shadow Mountain Bike Park (LSC #220850)

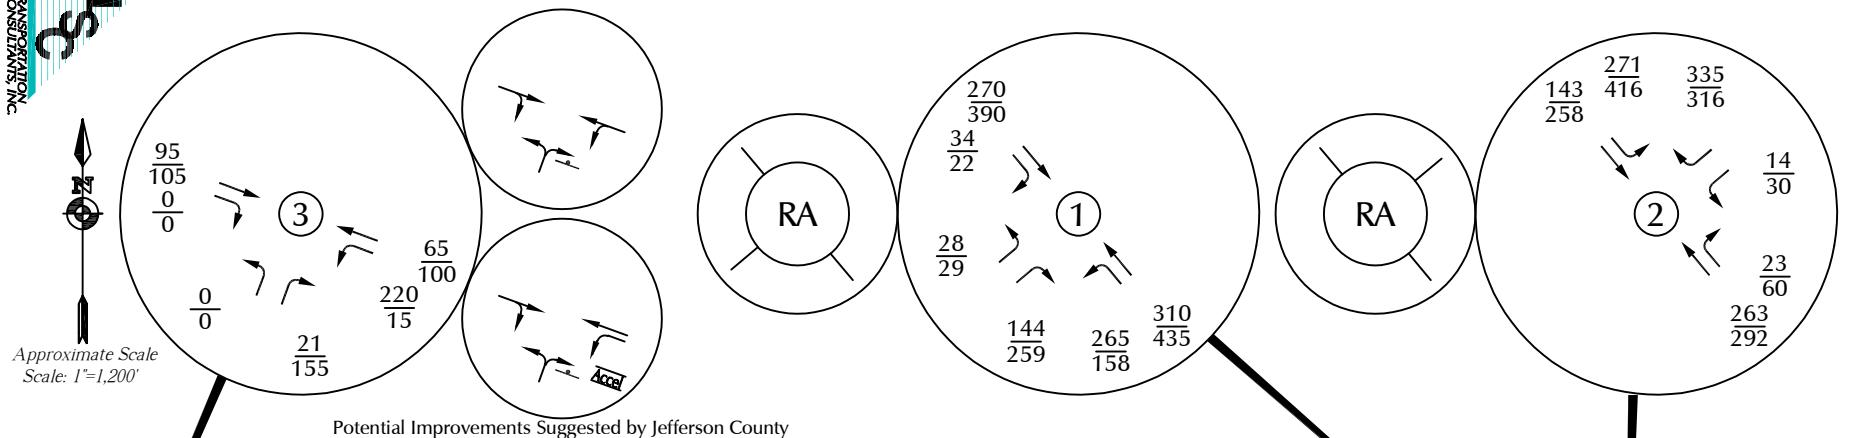

Notes:

1. These volumes are the sum of the volumes in Figures 5b and 7b.
2. The potential site access improvements suggested by Jefferson County are a left-turn lane for ingress and a right-turn acceleration lane for egress. The acceleration lane is not expected to provide much benefit but a left-turn lane for ingress could be beneficial if there are no existing constraints preventing it such as right-of-way or wetland limitations. An appropriate length for a left-turn lane would be 275 feet plus a 160-foot transition taper and 45:1 redirect taper.

Figure 9b

**Saturday Total Traffic**

Shadow Mountain Bike Park (LSC #220850)

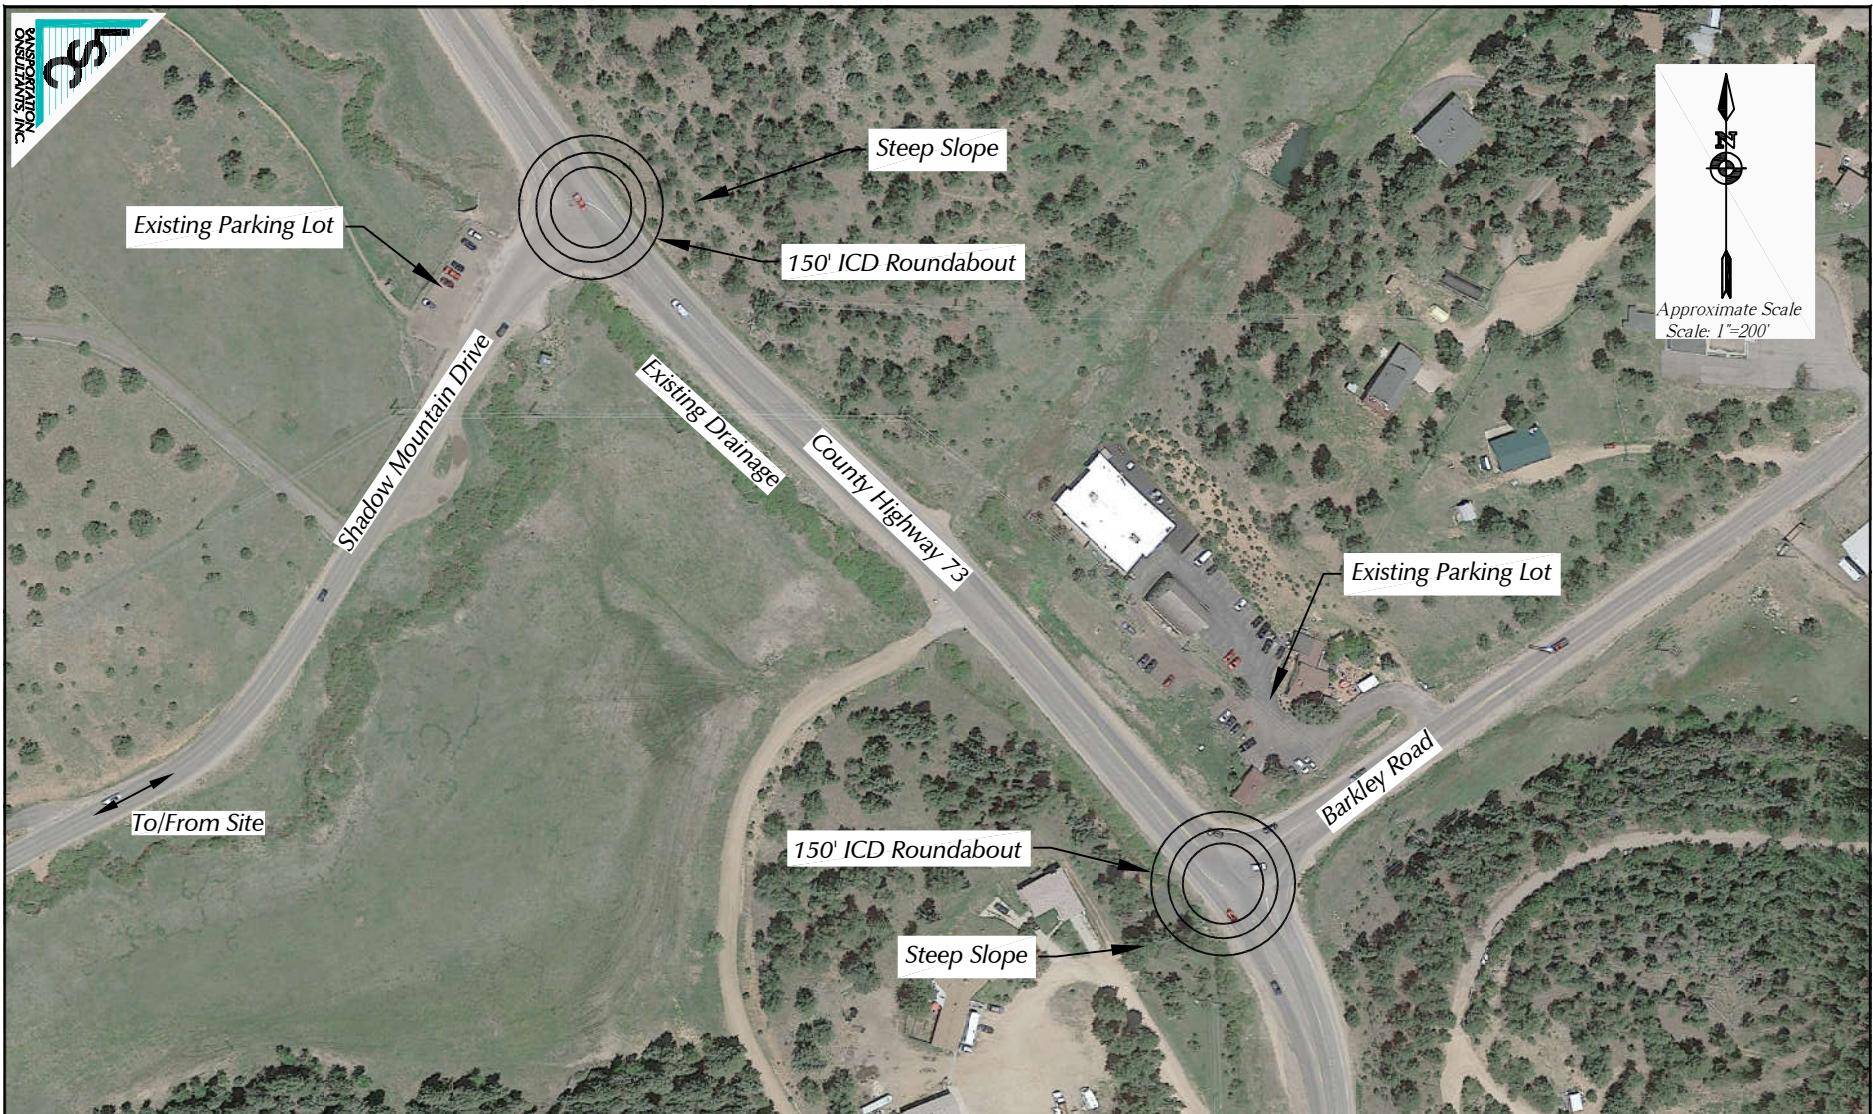

Notes:

1. These volumes are the sum of the volumes in Figures 5c and 7b.
2. The potential site access improvements suggested by Jefferson County are a left-turn lane for ingress and a right-turn acceleration lane for egress. The acceleration lane is not expected to provide much benefit but a left-turn lane for ingress could be beneficial if there are no existing constraints preventing it such as right-of-way or wetland limitations. An appropriate length for a left-turn lane would be 275 feet plus a 160-foot transition taper and 45:1 redirect taper.

Figure 9c

**Year 2043**  
**Sunday Total Traffic**

Shadow Mountain Bike Park (LSC #220850)

Notes:

1. The recommended mitigation over time is to construct a single lane roundabout at both locations consistent with feedback from Jefferson County.
2. Some of the potential design constraints are labeled above.
3. The site-generated trips are expected to comprise about 15 percent of Saturday peak hour trips by 2043 at CR73/Shadow Mountain Drive. This percentage will be much lower on weekdays and in the off-season.
4. The site-generated trips are expected to comprise about 12 percent of Saturday peak hour trips by 2043 at CR 73/Barkley Road. This percentage will be much lower on weekdays and in the off-season.

## LEVEL OF SERVICE DEFINITIONS

**From *Highway Capacity Manual*, Transportation Research Board**

### **UNSIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)**

Applicable to Two-Way Stop Control, All-Way Stop Control, and Roundabouts

| <b>LOS</b> | <b>Average Vehicle Control Delay</b> | <b>Operational Characteristics</b>  |
|------------|--------------------------------------|---|
| <b>A</b>   | <10 seconds                          | Normally, vehicles on the stop-controlled approach only have to wait up to 10 seconds before being able to clear the intersection. Left-turning vehicles on the uncontrolled street do not have to wait to make their turn.   |
| <b>B</b>   | 10 to 15 seconds                     | Vehicles on the stop-controlled approach will experience delays before being able to clear the intersection. <u>The delay could be up to 15 seconds.</u> Left-turning vehicles on the uncontrolled street may have to wait to make their turn.  |
| <b>C</b>   | 15 to 25 seconds                     | Vehicles on the stop-controlled approach can expect delays in the range of 15 to 25 seconds before clearing the intersection. Motorists may begin to take chances due to the long delays, thereby posing a safety risk to through traffic. <u>Left-turning vehicles on the uncontrolled street will now be required to wait to make their turn causing a queue to be created in the turn lane.</u>  |
| <b>D</b>   | 25 to 35 seconds                     | This is the point at which a traffic signal may be warranted for this intersection. The delays for the stop-controlled intersection are not considered to be excessive. The length of the queue may begin to block other public and private access points.  |
| <b>E</b>   | 35 to 50 seconds                     | The delays for all critical traffic movements are considered to be unacceptable. The length of the queues for the stop-controlled approaches as well as the left-turn movements are extremely long. <u>There is a high probability that this intersection will meet traffic signal warrants.</u> The ability to install a traffic signal is affected by the location of other existing traffic signals. Consideration may be given to restricting the accesses by eliminating the left-turn movements from and to the stop-controlled approach. |
| <b>F</b>   | >50 seconds                          | The delay for the critical traffic movements are probably in excess of 100 seconds. The length of the queues are extremely long. Motorists are selecting alternative routes due to the long delays. <u>The only remedy for these long delays is installing a traffic signal or restricting the accesses.</u> The potential for accidents at this intersection are extremely high due to motorist taking more risky chances. If the median permits, motorists begin making two-stage left-turns.   |
